

Cyberian SpeedHook

The Cyberian SpeedHook brings a paradigm shift to tool lashing methodology by extending "pull to loosen, pull to tighten" technology. Designed for 2.8-3.0mm cord, the SpeedHook is contoured to accept the radius of trekking poles or ice ax handles. User loops part around tool and hooks to cord loop and pulls to tighten. To access tools, simply unhook or pull on the part itself to loosen, then unhook.
